Accuracy

Accuracy means reading the words correctly. When you read, you need to decode the letters in a word and say the right word.

Example:

if you see the word "bug," you sound it out as b-u-g and read "bug" accurately.

Decode the words and read the rhythm fluently.

Reading Text	Wordcount
I see the sun, it smiles at me.	8
I see a bug, it crawls near a tree.	17
I see a cat, it jumps so high.	25
I see a dog, it runs right by.	33
I sit on the mat, I sip my drink.	42
I look at the hill and start to think.	51

Use the formula to measure your accuracy and rate while reading aloud.

$$\frac{\text{Words read in one minute}}{\text{Numbers of errors}} = \text{Words correct per minute(WCPM)}$$
